

To the International Bureau:

Teleglobe America Inc. (“Teleglobe”) requests an International Signalling Point Code (“ISPC”) for New York to be used as follows:

Teleglobe is replacing its existing GSP voice switches with SONUS soft switches, and will require a SS7 signalling gateway (SGX) and several gateways (GSX) between packet and circuit switching networks. With this submission, Teleglobe requests an ISPC for New York – GSX2 SSP.

The new switch will be physically located at the Teleglobe site at 60 Hudson Street, New York, New York 10013. The estimated implementation date is January 2008.

(Teleglobe has an ISPC that it uses in its existing voice switch in New York, but that point code cannot also be used with the new SONUS equipment.)
